**Mewbourne Oil Company Produced Water Pipeline Spill**
**NEC of US Highway 285 & CR 271 (Pulley Road)**
**2.1 Miles South of Malaga (Eddy County), NM 88263**
**NMOCD ID: Queen 2324**

Dear Mr. Bratcher:

Please consider this as the final report of a produced water release that occurred northeast on the intersection of US Highway 285 and County Road 271, approximately 2.1-miles south of Malaga, Eddy County New Mexico. The release occurred in Unit Letter C, Section 26, Township 24S, Range 28E (see Figure 1 for Location Map) at coordinates (32.195900, -104.061030). This report contains information related to the assessment, response activities and the subsequent cleanup.

## BACKGROUND INFORMATION

The spill occurred on April 28, 2018 when a high density polyethylene (HDPE) pipeline carrying produced water failed and release approximately 1,000 barrels of produced water onto the surrounding undeveloped land/pasture. Vacuum truck(s) recovered approximately 700 barrels of produced water following the spill. The spill was reported to have traveled approximately 350 yards to the west, along the pipeline right of way and surrounding pasture.

## RESPONSE AND REMEDIATE CHRONOLOGY

| | |
|---|---|
| 04/28/18 | A failure in the HDPE pipeline released approximately 1,000 barrels of produced water to the pipeline right-of-way and surrounding pasture. Approximately 700 barrels of the released produced water were recovered at the time of the release. |
| 05/29/18 | Four soil borings, MBS2-A, MBS2-B, MBS2-C, and MBS2-D, were installed in the spill area to provide vertical delineation of contamination. |
| 11/15/18 | Surficial soil sampling was conducted. Twenty-eight (28) samples were collected at various locations across the spill area at depths of <0.5 feet below ground surface. |
| 11/29-30/18 | Additional soil sampling was conducted in areas of samples collected 05/29/18, near MBS2-A and MBS2-D, and on 11/15/18 near samples SS1 through SS-25. |
| 12/05/18 | Soil excavated to 4 feet in the vicinity of S19, S20, S21, S22 & S23. |
| 12/09/18 | Sixty-two (62) foot deep temporary monitoring well was installed at the site to determine current depth to groundwater. |
| 12/10/18 | Temporary well determined to be dry and will be abandoned. |

| | |
|---|---|
| 12/18/18 | Six (6) confirmation samples collected from excavated areas in areas of samples S17, S18, S19, S20, S21, S22 & S23. |
| 01/17/19 | Confirmation samples collected after excavation of S-4, S-7, S-8, S-10, B2 (MBS2-C) and B3 MBS2-C) sample areas. |
| 01/29/19 | Excavation completed in all areas, except the three zones crossing the active subsurface pipeline. |
| 02/01/19 | Excavation initiated in areas of the subsurface pipeline, but greater than 5 feet from the pipeline location. |
| 02/04/19 | Confirmation samples collected after excavation of S1, S3, S5, S12, S15, S16, and B4 sample areas. |
| 02/19/19 | Pipe Support and Backfill Plan is prepared to provide structural support to the underground pipeline to ensure proper support during and after the excavation activities are conducted to remove chloride-contaminated soil surrounding the pipeline. Specification for the flowable fill mix to be used to below the pipeline to provide support are included in the Plan. |
| 02/20-23/19 | Confirmation samples collected after excavation of S12, S14, S25, and B1 (MBS2-A) sample areas. |
| 02/26/19 | Excavation around the pipeline was initiated using a Guzzler vacuum truck. A structural engineer provided oversight of the structural supports during the excavation and backfilling of the excavation with flowable fill. |
| 04/05/19 | All excavations were backfilled and hauling of soil to the landfill was completed. Surface of site was restored to pre-excavation conditions. |

## SAMPLING & ANALYSIS

Four soil borings installed on May 29, 2018 with thirty-seven (37) samples analyzed for chlorides using SM4500CI-B, sixteen (16) samples were analyzed for benzene, toluene, ethylbenzene xylenes (BTEX) using EPA Method 8021B, and total petroleum hydrocarbons (TPH) using EPA Method 8015M.

Twenty-five (25) assessment soil samples and three (3) background soil samples were collected November 15, 2018 and analyzed for chlorides using EPA Method 300.0. Sample locations for the assessment samples are included as Figure 2.

On November 29-30, 2018, an additional 25 soil samples were collected in locations near samples SS-1 through SS-25, and borings MBS2-A and MBS2-D. The samples were analyzed for chlorides using EPA Method 300.0.

Following excavation, confirmation samples were collected on December 18, 2018, January 17, 2019, February 4, 2019, and February 20, 2019, and analyzed to chlorides using EPA Method 300.0, TPH using EPA Method 8015D, and VOCs using EPA Method 8260B. Tables of analytical results are attached. The extent of excavation and confirmation sample locations are included on Figure 3.

Confirmation sample results indicate that sample less than 4 feet below ground surface (bgs) in the spill area have a chloride concentration of less than 600 mg/kg, and samples 4 feet or greater bgs have a chlorides concentration of less than 10,000 mg/kg. Confirmation sample analyses for TPH and VOCs recorded concentrations less than the laboratory reporting limits for all samples. Laboratory reports detailing the laboratory sample results are attached.

Based on the analytical results, no additional remedial activities are proposed.

## REMEDIATION OF CONTAMINATION

Based on the laboratory results of samples collected in May and November 2018, excavation was initiated to remove soil exceeding a chlorides concentration of 600 mg/kg at a depth of less than 4 feet bgs, or a chlorides concentration greater than 10,000 mg/kg at depth of 4 feet or greater in the spill area. Due to the presence of a subsurface pipeline that crossed the spill area, a structural engineer was contracted to design a support system and specifications for backfill to ensure the stability of the pipeline during and after excavation activities. See the chronology for the dates of these activities.

## WASTE CLASSIFICATION AND DISPOSAL

Waste was classified at non-regulated and non-hazardous waste. The excavated chlorides-impacted soil was transported to Lea Land, LLC Oil Field Waste Landfill in Carlsbad, New Mexico for disposal. Manifests are attached.

Please confirm that nothing else is being required for this spill incident. If you should have any questions or would like to discuss anything related to this incident, please feel free to contact me at 713-343-4482 x210 or tim.craft@atcgs.com.
