Well No. **1-14** is located **1650** ft. from **N** line and **990** ft. from **E** line of sec. **14**
NE 1/4 Sec. 14 **6-N** **11-W** **NMPM**
 (1/4 Sec. and Sec. No.) (Twp.) (Range) (Meridian)
Wildest **Valencia County, New Mexico.**
 (Field) (County or Subdivision) (State or Territory)

The elevation of the derrick floor above sea level is _____ ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

We propose to drill to approximately 6000' to test the Pennsylvanian formation. We will check the San Andres, Glorieta and Yeso formations between approximately 1500' and 2800'. We will set approximately 350' of 13-3/8" 48# H-40 casing. We will also set, if necessary, approximately 2000' of 9-5/8" 32.3 H-40 casing. If commercial production is found, we will set 5-1/2" 15.5# J-55 casing as an oil string. We will circulate the 13-3/8" casing with cement.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
