

MEMORANDUM

TO: Brent Chapel

FROM: Carol Reis *CR*

DATE: December 19, 1984

SUBJECT: Chalfont Kaiser #3

The Chalfont Kaiser #3 was air drilled in March, 1984. The well is located in the NE/4 of Section 12-29N-21E and based on sample tops, appears to be downdip from the Chalfont Kaiser 1-Y. Approximately 165' of Dakota sandstone was penetrated at 3455'. The well reached a total depth of 3675' in the Morrison formation, after encountering some water. An attempt was made to log the Kaiser #3. However, the hole was bridged at 3319' above the Dakota sandstone. The only pipe in the hole is 322' of 7" surface casing.
