Chapter 1: Introduction to Algebra

The first part of the course covers basic algebraic operations and the properties of real numbers. Students learn to simplify expressions, solve linear equations, and understand the relationship between different mathematical systems.

Key concepts include:

- Order of operations (PEMDAS)
- Properties of addition and multiplication
- Solving one-step and two-step equations
- Understanding the number line and intervals

Students are encouraged to practice these skills through a series of exercises and word problems that apply algebra to real-world situations.

The second part of the chapter introduces the concept of functions. A function is defined as a set of ordered pairs where each input has exactly one output. Students learn to represent functions using graphs, tables, and equations.

Key concepts include:

- Domain and range of a function
- Graphing linear functions and their equations
- Understanding slope and y-intercept
- Identifying functions from various representations

Students explore how functions can be combined and how they relate to other mathematical concepts like sets and mappings. They also learn about the importance of function notation in mathematics.

The chapter concludes with a review of the key concepts and a set of comprehensive exercises. Students are encouraged to continue practicing these skills to build a strong foundation for more advanced algebra and calculus.
