WESTERN FREEZIT CORPORATION
MANUFACTURERS OF
PURITY BRAND DRY ICE AND CARBON DIOXIDE GAS

MOSQUERO, NEW MEXICO
February 7th 1938

New Mexico School of Mines
Socorro, New Mexico

Gentlemen:

In regard to a pamphlet published by E. H. Wells and A. Andreas known as Gold Pan Supplement No. one. On page eight of this addition you state that the Western Freezit Corporation have a very small experimental plant and the results obtained to date have not been satisfactory.

We would like to know from whom you received your information as it is untruthful and misleading in every way. We do not have an experimental plant as we went through all those stages several years ago. We have been manufacturing dry ice in Colorado for several years. In fact we made the first dry ice ever made West of the Mississippi River.

It is true our plant is not complete but we have two compressors with a capacity of twenty tons each and with the plant incomplete could put out ten tons of dry ice per day.

I think this is very unfair for a state institution to put out this kind of information when every cent of money put into this business to develop something in this state has come from other states and not a cent of money from any one in your state being used.

I think we are due the respect of having this retracted and think your school should find out facts before they publish a thing of this kind.

We remain,

Yours very truly,

WESTERN FREEZIT CORPORATION
