2. If more than one lease is dedicated to the well, outline each and identify the ownership (if not both as to working interest and royalty).
3. If more than one lease of different ownership is dedicated to the well, have the interests of all owners been consolidated by communitization, unitization, force-pooling, etc?

☐ Yes ☐ No If answer is "yes," type of consolidation _____

If answer is "no," list the owners and tract descriptions which have actually been consolidated (if so reverse side of this form if necessary.) _____

No allowable will be assigned to the well until all interests have been consolidated (by communitization, unitization, forced-pooling, or otherwise) or until a non-standard unit, eliminating such interests, has been approved by the Commission.

RECOMMENDED DRILLING FLUIDS PROGRAM

<u>DEPTH FEET</u>	<u>WEIGHT P.P.G.</u>	<u>VISCOSITY SEC/1000cc</u>	<u>FILTRATE API</u>	
0-350'	8.8-9.0	35-40	No Control	Spud with a Fresh Water Gel and Lime type fluid using Fiber for any seepage encountered.
350-1100'	8.6-8.8	28-29	No Control	Drill out of the surface casing circulating the reserve pit with fresh water pretreated with Paper and Multi Seal type loss circulation material. Use Lime for a 9 to 10 pH.
1100-4700'	8.9-9.1	28-29	No Control	Drill out of the intermediate casing circulating the reserve pit with controlled cut brine water using Lime for a 9 to 10 pH. Make additions of Paper and Multi Seal to help prevent loss of circulation.
4700-7350'	9.0-9.2	30-40	8-10	At 4700' mud up through the steel pits with Salt Water Gel and Starch. Mud weight, viscosity, and water loss may need altering if hole conditions dictate or for logging and DST's.
7350'	9.0-9.2	40-45	5-8	At T. D. and before running logs, DST's or production casing, raise the viscosity to 40 sec/1000 cc's and reduce the water loss to less than 8 cc's.
