April 14, 1952

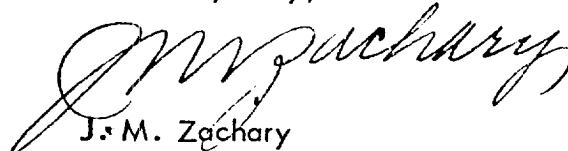

Mr. Roy Yarbrough
New Mexico Oil Conservation Commission
Hobbs, New Mexico

Dear Mr. Yarbrough:

Would you please furnish us a copy of the plugging data covering the G. H. Hamill No. 1 Tippin well, which was drilled in the NW/4NW/4 of Section 35, T-12-N, R-34-E, Quay County, New Mexico.

Please advise us what steps we would have to take in the event we decided to deepen this well. I assume all we need to do is to file the usual application to deepen with your office. We would like to have this information as soon as possible.

Yours very truly,

J. M. Zachary

OCC-SANTA FE

We have nothing on this in our files of Quay County- I wrote to Mr. Zachary, letting him know that this had been referred to you.

INSPECTION REPORT

October 17, 1951

Tippens-Hamill - #1 NWNW - Section 35-12N-34E -Quay County.

This location was inspected the day after it was plugged.
The rig was being torn down to move off the location. The
plugging job as represented and as inspected was satisfactory.
The total depth was 5615'. It was described as bottom corecite.
Surface casing was set at 340' and 25 sacks cement plugging
was put from 330' to 350'. A 10 sacks was put in top of casing
and 4"x4' steel marker was welded on top of surface casing.
Pending receipt of samples, plugging bond on this well can be
released.

ELVIS A. UTZ,
Gas Engineer
