INSPECTION REPORT  
June 19, 1952

BESS OIL & GAS COMPANY

Re: Bess-Rock Bros. #1  
NESW  
Sec. 10-16N-35E  
Quay County

This well has today reached a total depth of 2860'. Drilling is progressing at a rate of approximately 5' per day with 5" tools. The formation encountered at this depth is a coarse grained, apparently shistose sandstone suggestive of an intermittent granite wash occurrence.

I have collected a sample of the cuttings recovered at this depth and will send same to the Bureau of Mines and Mineral Resources for a thorough qualitative analysis.

EXPLORATION REPORT

June 19, 1952

Mr. Jess-Rock Street  
New Mexico  
Sec. 10-16W-33  
Crown Point

REPORT OF THE FIELD

This well has today reached a total depth of 2600'. Logging  
is continuing at a rate of approximately 5' per day with  
a total. The formation encountered at this depth is a  
course (shale, apparently) which contains suggestive  
of an intertuffite granite wash occurrence.

I have collected a sample of the surface recovered at  
this depth and will send to the Bureau of Mines for  
General Resources for a thorough qualitative analysis.
