INSPECTION REPORT

March 18, 1952

BESS-OIL & GAS COMPANY Bess-Rock Bros. No. 1
NESW Sec. 10-16N-35E
Quay County

On this date I visited the above captioned well and talked with Mr. Otto Bess, partner in this project.

Work that has been done since resumption of operations is under-reaming of 7" casing from 2011 to 2370' (latter casing had previously been seated at 2011' in May, 1951). Plans are to attempt to lower the 7" string down to 2370'. This will be attempted with down stroke jars since the casing could not be lowered by gravity.

At the time of this inspection the well was shut down as they were waiting on arrival of the downstroke jars.

EAC.

EUGENE A. CHAVEZ,
Geologist
