

Memo

2-25-77

From

CARL ULVOG

SENIOR

PETROLEUM GEOLOGIST

To

Well files #17 #2, A-22-45-6E.

Telephone calls to Century Geophysical at Milan, N.M. reveal that:

Mr. Hendricks was engineer in charge of radioactive logging at Reeves well when sonde was lost at 468'. Work was done under contract to Federal agency - he said A.E.C. When radioactive tool was lost, all data and records were turned to "Al Popp" with EIA (EPA??) and Century Geophysical officially knew nothing about matter. Well was supposedly 660' FN & FEL 2 of Sec. 22, and 750' deep.
