DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

Expect to set Conductor pipe, 14 or 16 inch pipe, 20 or 30 feet to prevent caving and will set 400 or 500 feet of 10 or 12 inch casing and cement same with about 175 sacks of cement. This depends on the water formation that we encounter, if we have water, we will have to set more casing than the above. This well will be drilled to a depth of 4,000 feet unless granite or production is encountered at lesser depth. Formation expected will begin in top of Yaso Formation, Abo Formation around 1100 feet, the Bursum Formation around 2100 feet and top of the Pennsylvania Formation 2560 feet. Will keep cuttings and samples. Will use cable tools in the drilling.
