7. Describe Proposed or Completed Operations (Clearly state all pertinent details, and give pertinent dates, including estimated date of starting any proposed work) SEE RULE 1103.

This well drilled to total depth of 2008 feet, formations penetrated: Yeso at 125', Abo at 563', and Madera at 1871'. Surface casing set 200 feet of 7 5/8 size and cemented by National Cementers Corporation, Grants, NM. Drilling below the 200' level was slow due to the hard and tight formations. We had slight shows of oil but no significant amount of fluids, due to the formation tightness. The adjoining RAF Corp. well, located 200' from the Shaw No. 1, showed no communication of fluids in the area formations. Therefore, we decided to plug and abandon this well. Real heavy mud was poured to within 600 feet from surface. The remaining 600 feet plugged solid with cement, poured by National Cementers Corporation. A four inch pipe placed in center and protruding four feet above ground surface. The surface has been restored to its original contour, approved by Mr. Shaw, landowner.

17. Describe Proposed or Completed Operations (Clearly state all pertinent details, and give pertinent dates, including estimated date of starting any proposed work) SEE RULE 1103.

Well drilled to total depth of 2008 feet. Filled from bottom to within 20 feet of surface with mud.

On Nov. 1st 1979, Thursday, re-entry was started and cleaned to depth of 1377'. At that point it was decided to temporarily abandon this well to commence drilling SHAW No. 2, on Section 13, 4N 7E. Mud was dumped to within 250' from the top.

Am now dealing with the RAF Corporation to take over and complete this well, when they complete and produce the SHAW No. 3. If this meets with your approval.

I hereby certify that the information above is true and complete to the best of my knowledge and belief.
