OIL CONSERVATION COMMISSION

P. O. BOX 871
SANTA FE, NEW MEXICO

INSPECTION REPORT

May 8, 1952

HARRY C. LONG

RE: Dalies No. 1 (formerly
Sunol No. 1) Sec. 32-7N-1E
Valencia County

C
O
P
A driller's total depth of 6079.7' had been reached on May 6. Schlumberger checked bottom at 6091' on May 7 and also took a number of side wall cores at all significant electric log formation peaks. The contracted depth for the above listed operator was 6,000'. Mr. Long has a five day period to decide whether to plug & abandon at this depth or turn the well over to Sunol Oil Company for deepening. In the latter eventuality the well would be temporarily abandoned pending Sunol's assuming responsibility to deepen.

P
The driller's log of the interval 4375-6079.7' is as follows:

Y
4375-4499' Entire interval, except 4425-4437, cored, core description not available.
4499-4608' Limestone w/traces sd. & lava
4608-5239' Ss. w/occasional ls. streaks.
5239-5422' Ss. & lime.
5422-5463' Sandstone
5463-5806' Ss. & ls.
5806-5950' Sandy ls. grading to calc. & shly. ls.
5950-5960' Shale
5960-6010' Ss. w/hard sh. streaks
6010-6047' Interval cored w/wire line barrel & samples circulated out at 6058' & 6069'.
6047-6069' Drilled out w/center bit, no description available.
6069-6079.7' Interval cored.

Cuttings samples of the above interval as well as samples of all cores cut were delivered to the Commission on this date. These will be taken to the state sample library at Socorro.
