---

On 2/12/2015 Yates Petroleum sampled the Compromise SWD #1 (2RP-2797) release with a backhoe. The release area was split, and samples were taken from 16 different holes. Samples were taken at 1' and 3' below surface in each hole.

On 2/20/2015 Yates received the analytical results back for the initial sampling conducted. These results were reviewed on 2/23/2015 and it has been determined that further vertical delineation is needed of the release area before a work plan can be written and sent to NMOCD. TPH and BTEX were non-detect for this release, however most sample points show elevated chloride levels.

I've attached a sample table summarizing the initial results along with a Google Earth map showing the approximate sampling locations.

Yates will schedule further sampling for chloride delineation as time allows in the next couple of weeks. Once sampled and we have more results, a work plan will be written and submitted to NMOCD.

Thanks,

**Amber Cannon**
