RE: Devon * Cotton Draw 10 Fed 3H * 30-015-42126 * 2RP-2983

Rebecca,

This work plan is approved as written. Normally the OCD would prefer a deeper excavation for a liner, but in the interest of safety and due to the presence of high voltage lines and transformers, we will accept an 18" excavation in this area. Please consult with the OCD in the event that sidewall confirmation samples cannot reach 1000 mg/kg due to safety concerns. Like approval by BLM is required for this site.

OCD approval does not relieve the operator of liability should their operations fail to adequately investigate and remediate contamination that may pose a threat to ground water, surface water, human health or the environment. In addition, OCD approval does not relieve the operator of responsibility for compliance with any other federal, state, local laws and/or regulations.

If you have any questions or concerns, and for notification, please contact me.

Subject: Remediation Plan

Good Morning,

I have attached a Plan for Remediating the Devon Cotton Draw 10 Fed API 30-015-42126. Basically, there is a current excavation on site that is at 3' bgs. Due to the horizontal and vertical results of our delineation; SESI is proposing the following:

Further excavate the East and South wall of the current excavation to the extent the Chlorides are <1000 mg/kg to a depth of 18" this is due to the number of high voltage lines to the East of the excavation. Backfill the current excavation to a depth of 18" and line the entire excavation with a 20 mil liner. Backfilling with a layer of topsoil, so as not to impede the liner followed with like surface material and restore to grade. Please don't hesitate to contact me if you have any questions.

Thank You

Rebecca Pons
