Mr. Baker -

This appears to be a release from Apache's pipeline R/W on BLM land, R/W ID No NM-126649. Therefore I will be handling all approvals for cleanup on BLM land. Generally, I expect to follow OCD's lead on this. Copy me on any proposed remediation plan for my approval, forward me all lab results, and get my approval before backfilling on BLM land. It appears all of the BLM land was surveyed for archeology, so that is not an issue. However, this area is occupied by the Dune Sagebrush Lizard; so all excavations should have at least one side ramped no steeper than 45-degrees (so any lizard that falls in can get out). All excavated material should be hauled off to a designated landfill (keep copies of load tickets, in case I ask for them), and any replacement fill should be virgin material (not remediated).

The BLM approval/acceptance does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that may pose a threat to groundwater, surface water, human health or the environment or if the location fails to reclaim properly. In such an event that the location does not revegetate, or future issues with contaminants are encountered, the operator will be asked to address the issues until the contaminant issues are fully mitigated and the location is successfully reclaimed. In addition, BLM approval does not relieve the operator of responsibility for compliance with any other federal, state or local laws/regulations.

Dara,

Attached is the initial C-141 and map of the release on 10/2/2015. I believe the southwestern edge of the release is on BLM. Please let me know if you have any questions or wish to discuss. Thanks and have a good day.
