Dear Mike,

Pursuant to our telephone conversation, I understand that Key Energy has permission to remove and properly dispose of contaminated soil generated from the recent release event and perform delineation of the footprint area. You indicated OCD has visited the site and agrees that our background sample should be collected approximately 300 feet, more or less, to the northwest located in the old cultivated field, which may now be owned by the State of NM Interstate Steam Compact Commission.

As discussed, before we backfill any area we will submit sample results for your review and obtain permission.

Please advise if OK to proceed.
