

Release Cleanup Plan: MG-1-1 Ext. 6.625 S

Line Leak: 2/15/2016

Location: T24S R30E Sec 13 GPS: N32.4919438° W104.0294769° Eddy County

DCP will determine the lateral and vertical extent of the contamination (trenching). Once this has been determined all visible contaminated soil will be excavated and transported to a NMOCD solid waste disposal facility. During excavation contaminated soil may be put on plastic barrier material if awaiting disposal or hauled directly to the disposal facility by truck.

Confirmation samples will be collected and analyzed for BTEX, TPH, and Chlorides (10 total, 2 on each wall and 2 beneath the pipeline leak). The values must be below BTEX and TPH cleanup criteria prescribed in *Guidelines for Remediation of Leaks, Spills, and Releases* (1993) authored by the New Mexico Oil Conservation Division and is a function of groundwater depth and distance to water wells and surface water bodies. If sample analyses show levels above cleanup criteria re-excavation and resampling will be performed. If depths reach greater than 6 feet below the pipeline itself, a further discussion involving a liner will be initiated.

After closure is approved the area will be backfilled to grade with clean soil and seeded with BLM approved seed. Microblaze will be applied to areas with impacts less than one inch in depth. A closure report will be prepared for BLM review and will include a narrative of cleanup activities, analytical, and a diagram of impacted area.

Please contact me via cell phone if you have any questions or concerns.

Sincerely

Nicholas L. Case
Environmental Specialist
