RE: Apache Corp. \* EAU 141 (aka EAU Emulsion Line) \* **2RP-3572** \* DOR: 2/24/16

Bruce,

Your April 26, 2016 proposal for remediation of the above referenced release, is not approved. OCD does not believe this site is a good candidate for the remedial process proposed, due to surrounding drainage features that terminate at the Pecos River, the possibility of encountering ground water at some depth below the site, highly elevated BTEX/TPH that exists primarily in the upper 1' or so of the release path, the typically rocky nature of the area, and, the site being situated in BLM mapped "High" cave/karst area. Please submit an alternative proposal for this release. Measures may need to be taken in the very near future to keep contaminants from being washed into the drainage feature to the north.

Thank you,

Mike Bratcher

All,

Attached is an in-situ corrective action proposal for your review. Please let me know if you have any questions or wish to set up a meeting to discuss the proposal. Thanks and have a good day.
