OK, found both. Thanks.

The BLM remediation project (2RP-2670) was completed, but a final report was not submitted. The site was cleaned, tilled, fertilized, and seeded, but we weren't happy with the new grass growth by the end of the growing season in 2015. We were trying to allow more time before seeding and fertilizing a second time. I don't have any current photos to show change in vegetation, and frankly it fell off my radar; I will contact our area superintendent and get him to take some. What kind of closure report do you need for this one?

The second project (2RP-2492) also was completed, although I can't lay my hands on the report. It is possible that none was submitted. How would you like me to proceed?

And this is the BLM remediation for the same area. (2RP-2670)

I'm sorry, Heather. I recognize Grayburg Jackson, but I don't file things the same way BLM does and computer searches won't find documents using the referenced numbers. Would you send me copies so that I know what I am looking for?

Thanks,

RE: EnergyQuest * Grayburg Jackson PSU MB 12 * 30-015-20256 * 2RP-2492 * 2RP-2670

Mr. Davis,

The OCD Artesia district has two open remediation permits for the above listed location. 2RP-2492 was the release caused by Dean's Electric (actually was 3 small releases). And 2RP-2670 is a BLM interim remediation project.

If you have closure documents for these, can you please send them so we can close these out in out books.

Thanks,

Heather Patterson
