RE: Dakota Resources, Inc. Trigg Federal #1 Unit Letter L Section 7 T21S R28E API# 3001525006 Fenton Federal (Delaware) Field

Dear Mr. Bratcher,

I recently visited with Heather Patterson about an old spill that occurred on our well located in Eddy County New Mexico. I was under the impression from Sheldon Hitchcock with Talon Pipe(our Consultant) that the OCD approval and the BLM permit would be good for a period of two(2) years, and is about to expire. Dakota decided to put this work off as long as possible due to the crash in oil prices. Now we are ready to implement the plan and commence cleanup. As you may remember, a preliminary cleanup was completed immediately after the spill and all of the visually contaminated material was hauled to an approved sight and replaced with new material. After meeting with both representatives from the OCD and BLM, sampling multiple areas and taking these samples to a lab, a plan was agreed on by everyone. The final plan did forego the installation of a plastic liner since it could not be installed under the water tanks. If that plan is still agreeable we are ready to begin work and implement the approved plan and get this well back into operation ASAP. Chris Morphew
