Brenda,

I appreciate the work that has been conducted in this report, but unfortunately I cannot approve excavation depths based surface staining alone. The OCD requires soil delineation that defines the contamination both vertically and horizontally within the soil matrix using lab analysis. The constituents that should be tested for are TPH (GRO, DRO, and MRO), BTEX, and chlorides. Excavation depths will be determined once these parameters are known. If you or your contractor have any questions, please don't hesitate to call.

Thank you,

Heather Patterson
