RE: Chevron USA * Greenwood PGU 4 Battery * 2RP-3929 * DOR: 9/5/16

Chris,

Your proposal for remediation of the above referenced release is approved. Impacted material needs to be hauled to an OCD approved disposal facility. In regard to the legacy reclamation sites, OCD will defer to BLM for the proposed reclamation methods. Like approval from BLM for the battery remediation is also required. Please advise once remedial activities have been scheduled.

OCD approval does not relieve the operator of liability should their operations fail to adequately investigate and remediate contamination that may pose a threat to ground water, surface water, human health or the environment. In addition, OCD approval does not relieve the operator of responsibility for compliance with any other federal, state, local laws and/or regulations.

If you have any questions or concerns, and for notification, please contact me.

Thank you,

Mike Bratcher

Subject: RE: Greenwood 4 CTB

Mike,

I apologize for not following up with you sooner on this matter but we have been in discussions with our partner at this facility who have had several disagreements with our initial plan to remediate this location. In short our partners feel our initial plan went above and beyond the regulatory requirements for cleanup and site reclamation. In an effort to resolve these issues we have had additional samples taken and have revised our plan to cleanup the battery site.

I have attached the original plan we submitted to both the NMOCD and the BLM as well as the additional samples taken at sample point #6.

Given that the results of the analyticals for the battery site are all below regulatory requirements for cleanup, Chevron, along with our partners, is proposing to remove approximately 18" of the contaminated soil from the battery site and replace with native top soil to establish a growing medium for vegetation.

The historical spill sites will be addressed as described in the original Sundry.

Please let me know if this is an acceptable path forward and if you have any recommendations or additional requirements. Please feel free to give me a call if you have any questions or if you would like to discuss in more detail.

Thanks,

Chris S. LeBlanc

Chris,

I don't have record of having received this, but I will have this one processed.

Thanks,

Mike Bratcher

Mike,

Yes, a C-141 was turned in. See attached.

Please let me know if you need any additional information.

Thanks,

David,

I have a meeting pending that I should know more on later this morning. Was a C-141 turned in for this release?

Good morning Mike,

We will have a meeting Wednesday morning at 9:00 am (10-05-16) with Jim Amos of BLM at the Greenwood 4 CTB (32.720021, -103.849320) concerning the 200 bbl. spill we had at location. We were able to recover 160 bbl.'s. The tank battery will be completely reclaimed. We were hoping you could attend.

Thanks, David
