---

Ms. Ragsdale,

I appreciate you talking with me this morning. Please see the attached photos of the Leonard State #2 well (30-015-03543). The tank on location has been leaking, and according to witnesses, production has resumed at this location. It also appears as though a cleanup is underway, but the OCD has not received a spill report.

Also noted in the complaint are three old tanks that have been dumped to the east of this location. The assumption is these are associated with the Jim Pierce wells and have been placed there by Buddy DeLong.

Several other Jim Pierce Wells have environmental concerns, both historic and recent as wells are being readied to go back into production by Mr. DeLong.

Thanks,

Heather Patterson  
Environmental Specialist

Howdy.

Ranch foreman stopped me for this one. SESW sec 1 19s 29e. Started pumping old well in last couple weeks. Tank leaking at inspection hatch. Also 3 old tanks dropped on old pad a couple hundred yards to the east of here.

Robert
