Subject: Re: Pintail 23 Fed #8

Good Afternoon Christine,

Due to the length of time that the contaminants have been left on location, I am going to require a confirmation sample 2 ft. below the excavation to ensure that migration did not occur. In addition to that, the proposed amount of soils to be removed/remediated will be excavated in 14 days. For this location, I was mostly waiting on feedback from NMOCD and in the future will probably request to have contaminated soils picked up within 30 days if no work plan is in place and/ or remediation not completed within 45 days.

Please let me know if you have any issues or concerns. Thank you.

Christine,

After further review of the above referenced release site, and the proposed soil washing procedure for remediation of the impacted material, OCD does **not** approve the soil washing method in this instance. Given the potential for encountering ground water at less than 50', the site is also situated in a BLM mapped "High Karst Potential" area. OCD would encourage submittal of a similar proposal for a release occurrence at a more suitable location for this method of remediation. At this time, please submit an alternative remediation method for this release.

Thank you,

Mike Bratcher

RE: 2RP-4006

Christine,

OCD is reviewing several soil washing proposals, and this is one of them. I do have some questions on this one in particular and will get those to you as soon as I get some more input from our group.

Thanks,

Mike Bratcher

Mr. Bratcher,

I was wondering if you have had a chance to review the attached workplan.

Thank you!

Mr. Bratcher,

Please find attached the revised workplan for the Pintail location. We have included the requested leak detection portion.

Thank you, and please let me know if you have any further concerns.
