Crystal,

Please find the attached pictures of the ruptured flowline, and the general area it was located inside of lined containment.

Hey Jim,

Can you see if we have pics on the share drive? And please send to Crystal?

Thanks

Karolina,

I am only asking for this for my learning and understanding and not because it is a required thing (at least not this week any ways...) but do you happen to have a picture of this when the spill happened or of the inside of the containment where the flowline is that had the leak? I have a really hard time visualizing this stuff but I do want to move this one forward and out of the queue since Mike and I will both be gone for a work trip all next week.

Thank you madam,

Crystal Weaver

Good morning,
Attached is the initial and final C-141 for the Longview Federal 12-15 spill. All fluids were contained inside lined SPCC containment ring and did not impact the environment.
Please let me know if you have any questions or suggestions.
Thank you and have a great day,

Subject: WPX Longview Federal 12-15 - initial notification

Good afternoon,

WPX had a produced water spill this morning, 6/29/17, at 7 am at the Longview Federal 12-15 pad . API #30-015-41092; C-12-23S-28E. The cause is equipment failure; corroded flowline. 25 bbls of produced water was spilled inside lined containment. All the spilled fluids were recovered. The environment was not impacted by this spill. The initial/final C-141 will be submitted within the next 15 days however, please do not hesitate to contact me if you have any questions or suggestions.

Thank you,

Karolina Blaney
