Subject: Initial Site Assessment/Characterization Report - Chevron - Vacuum Grayburg San Andres Injection Station - (1RP-5643) 7-17-2019

Amy,

We have received your Site Sampling Plan for **1RP-5643 Vacuum Grayburg San Andres Injection Station**, thank you. This Site Sampling Plan is approved with the following condition:

- If rock refusal interferes with the remediation process, use a back-hoe/track-hoe to remove the rock. If the rock is immovable and target depth cannot be reached, use a hydrovac to clean the contaminated soil off of the rock surface and outline specific locations and steps taken on the Closure Report.
- layer the cleaned rock with Micro-Blaze or liquid with microbial strains, surfactants and nutrients designed to digest organics and hydrocarbons.

This Site Sampling Plan will be accepted and imaged for record. Please load the Remediation Plan to the Payment Portal, when finalized.

Please let me know if you have any further questions.

Thank you,

Robert J Hamlet

OCD approval does not relieve the operator of liability should their operations fail to adequately investigate and remediate contamination that may pose a threat to groundwater, surface water, human health or the environment. In addition, OCD approval does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.
