Subject: [EXT] Closure Report - Corral Canyon Central Tank Battery (2RP-5550)
Attachments: XTO_Closure Report_Corral Canyon Central Tank Battery_2RP-5550.pdf

On behalf of XTO, please see the attached closure report for the Closure Report - Corral Canyon Central Tank Battery (2RP-5550). The report has been uploaded to the NMOCD permitting portal (PO#: OP63C-191127-C-1410).

BLM Summary:

Delineation soil samples PH01/PH01A through PH06/PH06A were collected from within the release extent from depths of 1 foot and 2 feet bgs to assess for the presence or absence of soil impacts as a result of a July 4, 2019, release. Laboratory analytical results for all soil samples indicated benzene, BTEX, GRO and DRO, TPH, and chloride concentrations were compliant with the Closure Criteria. Additionally, field screening of soil indicated volatile aromatic hydrocarbons and chloride concentrations were not elevated and soil staining and petroleum hydrocarbon odors were not identified within the release extent. Based on initial response efforts, absence of elevated field screening results, and soil sample laboratory analytical results compliant with the Closure Criteria, no impacted soil was identified and no soil excavation was required as a result of the produced water release.
