RE: Incident #**NRM2004938133**

Kyle,

Your request for an extension to **March 2nd, 2021** is approved. XTO is requesting an extension of the current deadline of October 29, 2020, for submitting a remediation work plan or closure report at the Stan 32 State 71H (Incident ID NRM2004938133). XTO has conducted Electrical Resistivity Imaging (ERI) surveys on the well pad and pasture area north of the pad. The ERI reports are being used to evaluate potential subsurface impacts and guide remediation activities. A Right of Entry (ROE) Permit Office (SLO) on April 27, 2020 to conduct further site assessment. The ROE permit was issued on June 11, 2020. An application for a permit to drill monitoring/recovery wells was submitted to the New Mexico Office of the State Engineer (NMOSE) on June 16, 2020. The NMOSE approved permit was issued on June 29, 2020. An application for a water monitoring/recovery well easement was also required by the SLO and is currently in process. The easement application process was delayed due to the requirement for an archaeological survey, which is also in process. No surface or subsurface disturbance activities can commence until an easement has been issued by the SLO. An extension of time for completion of a remediation work plan or closure report is necessary to provide enough time for the easement application to be processed and to complete additional site assessment activities and remediation work. Based on the good cause shown, XTO requests an extension of the deadline to complete remediation or submit a remediation plan or closure report until March 2, 2021.

Thank you,

Subject: [EXT] XTO- Extension Request - Stan 32 State 71H (Incident ID NRM2004938133)

All,

was submitted to the State Land Pursuant to NMAC Section 19.15.29.12.B., XTO is requesting an extension of the current deadline of October 29, 2020, for submitting a remediation work plan or closure report at the Stan 32 State 71H (Incident ID NRM2004938133). XTO has conducted Electrical Resistivity Imaging (ERI) surveys on the well pad and pasture area north of the pad. The ERI reports are being used to evaluate potential subsurface impacts and guide remediation activities. A Right of Entry (ROE) Permit Office (SLO) on April 27, 2020 to conduct further site assessment. The ROE permit was issued on June 11, 2020. An application for a permit to drill monitoring/recovery wells was submitted to the New Mexico Office of the State Engineer (NMOSE) on June 16, 2020. The NMOSE approved permit was issued on June 29, 2020. An application for a water monitoring/recovery well easement was also required by the SLO and is currently in process. The easement application process was delayed due to the requirement for an archaeological survey, which is also in process. No surface or subsurface disturbance activities can commence until an easement has been issued by the SLO.

An extension of time for completion of a remediation work plan or closure report is necessary to provide enough time for the easement application to be processed and to complete additional site assessment activities and remediation work. Based on the good cause shown, XTO requests an extension of the deadline to complete remediation or submit a remediation plan or closure report until March 2, 2021. Thanks. --Kyle
