Wade,

We have received your Workplan/Remediation Proposal for **Incident #NRM2015542482 Red Tank 34 Fed #3**, thank you. This Workplan/Remediation proposal is approved with the following conditions:

- When nearby wells are used to determine depth to groundwater, the wells should be no further than ½ mile away from the site, and data should be no more than 25 years old, and well construction information should be provided. If evidence of depth to ground water within a ½ mile radius of the site cannot be provided, impacted soils will need to meet Table 1 Closure Criteria for ground water at a depth of 50 feet or less.
- Contaminated soil will need to be excavated to the first clean sample point depth (under closure criteria limit), which would be 600 mg/kg for Chlorides and 100 mg/kg for TPH.
- Please excavate sample point area SP2 to a depth of 2 feet below surface. TPH needs to be below Table 1 standards of the Spill Rule for <50' depth to groundwater.

Please let me know if you have any further questions.

Regards,

Robert Hamlet • Environmental Eng. Tech. III

OCD approval does not relieve the operator of liability should their operations fail to adequately investigate and remediate contamination that may pose a threat to groundwater, surface water, human health or the environment. In addition, OCD approval does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.
