13. Describe Proposed or Completed Operation (clearly state all pertinent details, including estimated starting date of any proposed work and approximate duration thereof. If the proposal is to deepen directionally or recomple horizontally, give subsurface locations and measured and true vertical depths of all pertinent markers and zones. Attach the Bond under which the work will be performed or provide the Bond No on file with BLM/BIA. Required subsequent reports shall be filed within 30 days following completion of the involved operations. If the operation results in a multiple completion or recompletion in a new interval, a Form 3160-4 shall be filed once testing has been completed. Final Abandonment Notices shall be filed only after all requirements, including reclamation, have been completed, and the operator has determined that the site is ready for final inspection.)

SUP 1270
Chevron North America, respectfully requests administrative approval to inject salt water into the Skelly Unit well # 51, (API # 30-015-05348), located: 1980' FSL & 660' FEL, Unit Letter D; Section 22; T17S & R31E, Eddy County, New Mexico.

The Injection interval will be in the Wolfcamp and Cisco formation, perforated: 9430'-9470', 9550'-9650.

The proposed well procedure is to: MIRU PU and install BOP. Drill out plugs to 10,045'. RIH w/ 5 1/2" csg. Cement in place. RU wireline and perf the following intervals w/ 4 JSPF: 9430'-9470', 9550'-9650'

TIH w/ treating pkr & 2-7/8" WS. Acidize perfs. Release & TOH w/pkr. TIH w/ injection pkr and 3 1/2" tubing. ND BOP, NU wellhead. Perform MIT, and RDMO PU.

The estimated starting date will be upon regulatory approval and the duration is approximately 12 days.

Forgo the squeezing of the perforations from 3219-3606' with Class C Cement, and therefore avoid the CIT to 1500 psi outlined in the the conditions of approval (page 9), because of the distance from the bottom perf to the current casing shoe.
