13. Describe Proposed or Completed Operation. Clearly state all pertinent details, including estimated starting date of any proposed work and approximate duration thereof. If the proposal is to deepen directionally or recompleat horizontally, give subsurface locations and measured and true vertical depths of all pertinent markers and zones. Attach the Bond under which the work will be performed or provide the Bond No. on file with BLM/BIA. Required subsequent reports must be filed within 30 days following completion of the involved operations. If the operation results in a multiple completion or recompleat in a new interval, a Form 3160-4 must be filed once testing has been completed. Final Abandonment Notices must be filed only after all requirements, including reclamation, have been completed and the operator has determined that the site is ready for final inspection.)

Steps taken for Remediation:

1. Approximately two (2) feet of contaminated soil was excavated from the pit area with this material being transported to an NM OCD approved disposal facility.
2. This excavated area, 150' x 200', was then lined with a 20mil synthetic liner with the edges being trenched in. This liner will serve as a barrier to prevent upward migration of remaining chlorides.
3. This excavated area was then backfilled with 2' of clean caliche with an additional 1' of topsoil on top of the caliche. This brought the area up to the elevation of the surrounding terrain.
4. The area was then contoured to match the terrain of the area and seeded with a BLM approved see mixture.
