## **Emergency Response Planning**

### ***Philosophy***

Devon Energy Corp. is committed to minimizing health, safety and environmental risks involved in our operations. While covering all possible emergency situations is impossible, this plan addresses basic emergency response procedures and our plan for containing/controlling those hazards. This plan covers the “basics” of an emergency situation and should be viewed as a guidance document. It is an initial response plan designed to provide guidance in most emergency situations.

### ***Nondisclosure Statement***

Due to the sensitive position that an emergency places the petroleum industry as a whole, we ask that the information gathered during the control of a blowout operation be held proprietary by all team members, company personnel and contract service companies. Such information remains the property of Devon Energy Corporation and may not be released without written consent.

### ***Using this Manual***

This plan covers the “basics” of an emergency situation and should be viewed as a guidance document. Good communication protocols are set forth as primary and should be regarded in a serious fashion. Contact management first so as to take advantage of collective reasoning regarding an emergency situation.

This document can also be used in training and preparedness of emergency situations for all personnel.

## Site Specific Emergency Information

### Townsend 28 Well #1

This is an open drilling site. H<sub>2</sub>S monitoring equipment and emergency response equipment will be used within 500' of zones known to contain H<sub>2</sub>S, including warning signs, wind indicators, flare equipment and H<sub>2</sub>S monitors.

Prevailing wind direction is N-NE

### Location Satellite Photo

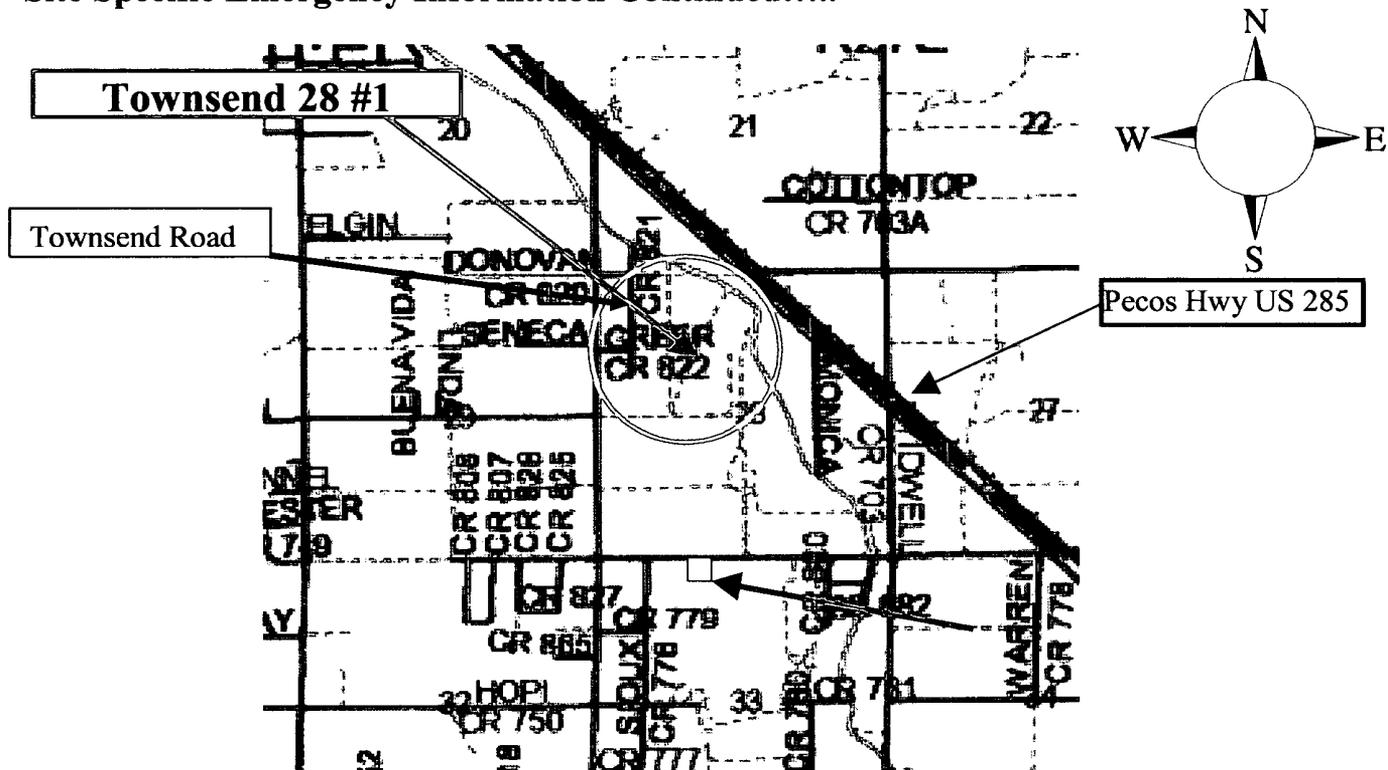

Shown on the map are the homes and distances from the wellsite.

A warning sign shall be displayed at the entrance to the location.

Safe briefing areas will be set up as a first staging/planning area in an emergency

**Site Specific Emergency Information Continued.....**

**100 ppm ROE = Assumed 3000' feet (Radius of Exposure)**

**An unanticipated release of sour gas shall trigger activation of this plan.**

**Escape**

Crews shall escape upwind of escaping gas in the event of an emergency release of gas. Escape can be facilitated from lease road west, then north or south until out of the ROE. Drivers in the area must be flagged and stopped so as to prevent entry into a hazardous area. There are homes adjacent to the ROE. Take all care to protect those within the dwellings.

**Emergency Procedures**

In the case of a release of gas containing H<sub>2</sub>S, the first responder(s) must isolate the area and prevent entry by other persons into the 100 ppm ROE. Additionally the first responder(s) must evacuate any public places encompassed by the 100 ppm ROE. First responder(s) must take care not to injure themselves during this operation. Company and/or local officials must be contacted to aid in this operation. Evacuation of the public should be beyond the 100 ppm ROE.

All responders must have training in the detection of H<sub>2</sub>S, measures for protection against the gas, equipment used for protection and emergency response. Additionally, responders must be equipped with H<sub>2</sub>S monitors and air packs in order to control the release. Use the "buddy system" to ensure no injuries during the response.

## Site Specific H<sub>2</sub>S Safety Information

|                                   |   |
|-----------------------------------|---|
| <b>Emergency Preparedness</b>     | Blowout Prevention equipment has been upgraded for H <sub>2</sub> S service.<br><b><u>H<sub>2</sub>S service equipment complies with API Spec 6A (10<sup>th</sup> edition).</u></b>   |
| <b>Mud Program</b>                | <p>The drilling mud program has been designed for use in potential H<sub>2</sub>S bearing zones. pH will be controlled and a corrosion program utilized to ensure the integrity of metals &amp; gasket materials.</p> <p>Flow sensor and PVT (Pit Volume Totalizer) with a pit level indicator and alarm system will be installed and utilized.</p> <p>A mud-logging unit will be operational from base of surface casing to TD.</p>  |
| <b>Pressure Control Equipment</b> | <p>During Drilling: A 5000-psi working pressure BOP, consisting of a double-ram type preventer, 5000-psi bag-type annular preventer, choke manifold and closing unit. BOP &amp; Choke Manifold unit will be hydraulically operated by remote control unit(s). The BOP will be nipped up on an 11" 5000-psi casing head. Full opening stabbing valve and upper Kelly cock valve will be utilized from ~1000' to TD.</p> <p>During Completion: A double-ram type preventer will be utilized w/ one set of pipe rams, and one set of blind rams that are hydraulically operated by remote control unit(s), and a manually operated choke manifold.</p> <p>Surface Casing is new and complies with API K/J-55 STC</p> <p>Production casing is 7", 26#, API, HCP-110, LTC casing set at TD at 8830. Liner and 4 1/2" from 8530 to TD.</p> <p><b>Well Control Equipment to be utilized:</b></p> <ul style="list-style-type: none"><li>• A 40' flare line with automatic ignition system. Flare gun and flares are on site as a redundant backup system.</li><li>• A mud-gas separator and required solids control equipment will be rigged up for drilling the production hole.</li><li>• A rotating head will be used on top of the BOP stack.</li><li>• During completion, a stripper rubber will be utilized and all fluids and gas contained, separated and flared.</li></ul> |
| <b>Testing</b>                    | No DST testing is programmed for this well  |

**Safety  
Equipment**

- A stationary H<sub>2</sub>S monitor with 3 sensors will be installed within proximity of any point source discharge.
- Portable monitors for H<sub>2</sub>S will be available onsite.
- At least 3 Wind indicators will be installed onsite, clearly visible from all directions.
- Caution/Danger signs and flags are to be installed at the entrance to the location, far enough in advance to provide adequate pre-warning.

**Monitor sensors shall be calibrated weekly.**

## Site Safety Planning Checklist

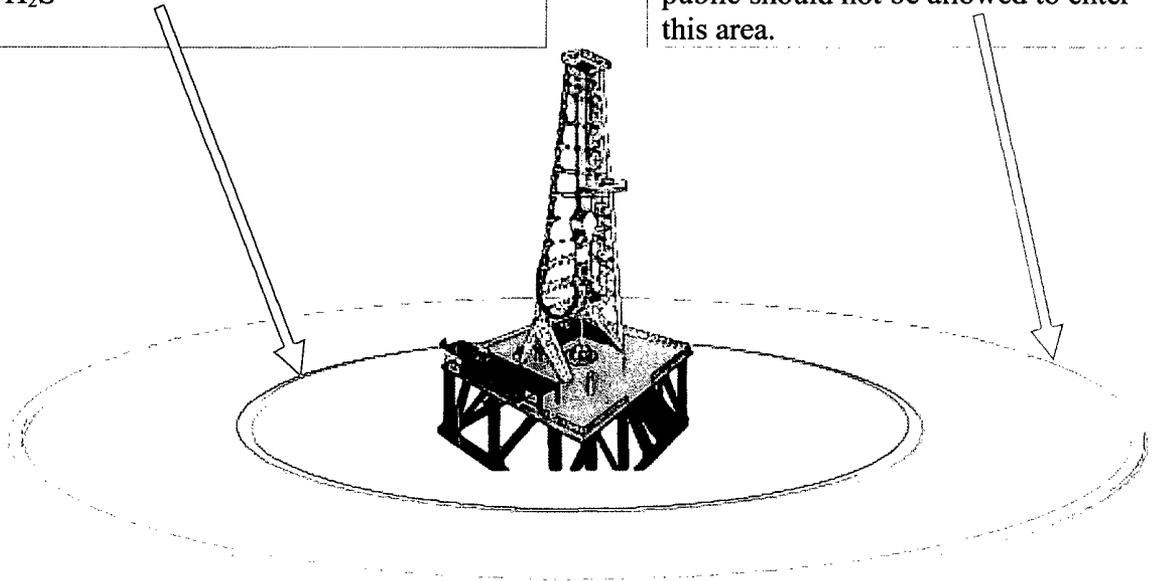

|   |  |
|---|--|
| <b>Evacuation</b>                                   | <ul style="list-style-type: none"><li>• Evacuate well site personnel and account for all by name and company affiliation.</li></ul> Evacuate nearby homes and businesses. Account for all by location.<br>Notify local emergency services, outline problem and requirements.   |
| <b>Select "Safe Briefing Area"</b>                  | <ul style="list-style-type: none"><li>• Accessible by heavy trucks</li><li>• Accessible to wellsite</li><li>• Upwind</li><li>• 0% LEL (Lower Explosive Limit as measured with available meters)</li><li>• &lt;5 ppm H<sub>2</sub>S</li><li>• &lt;85 dB Noise Level</li><li>• &lt;1.6 kW/sq. meter heat load (maximum heat load sustainable on exposed skin for more that a few minutes)</li></ul>  |

# H<sub>2</sub>S Release Decision Chart

**ROE explained**

300 PPM Radius of Exposure – Take extreme precautions when working in this area. All personnel should be counseled and prepared to evacuate from within this area upon a sudden release of H<sub>2</sub>S

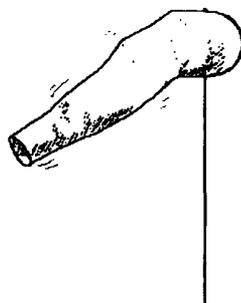

100 PPM Radius of Exposure – This is the minimum safe distance for evacuation purposes for normal, healthy workers. Personnel should not remain in this area unprotected. The public should not be allowed to enter this area.

The ROE depicts the area that H<sub>2</sub>S could occupy in any direction should the wind carry it that way. This is the distance the H<sub>2</sub>S will dilute to stated (300 ppm or 100 ppm) level. Concentrations within the ROE could exceed stated level

**Always evacuate upwind to maximize your escape potential.**

**Windsock Usage**

The way the windsock blows is pointing toward the downwind direction. This is not the direction you should evacuate toward. Evacuate in the opposite direction.

**Windsock pointing ← means evacuate →**

Never escape toward the point source discharge of H<sub>2</sub>S even if that is the upwind area.

## H<sub>2</sub>S & SO<sub>2</sub> Emergency Immediate Action Plan

**Alert and account for all personnel on location.**

- Move away from the source of the H<sub>2</sub>S/SO<sub>2</sub> and get out of the affected area. Move upwind from the well bore. Avoid inhalation of H<sub>2</sub>S/SO<sub>2</sub>.
- Don proper personal breathing equipment – 30 min. SCBA.
- Assist any personnel in distress using the “buddy system.”
- Alert other affected personnel on location.
- Proceed to pre-designated meeting area.
- Account for all personnel on location.

Take action to control the release of the H<sub>2</sub>S/SO<sub>2</sub>. Eliminate all possible sources of ignition.

*Do not re-enter the affected area without appropriate breathing equipment.*

- Take all appropriate measures to shut in the H<sub>2</sub>S gas source.
- Put out all open flames in the affected area and shut down all motors.
- **Notify supervisors.**
- **Notify the Devon on-site supervisor or refer to the Devon call list and notify the office to assess the situation to re-gain control.**
- **Notify local law enforcement agencies, residences down wind of release, other residents, and any affected highway or street traffic.**
- **Emergency vehicles will be handled by the on-site supervisor. Any press inquiries are to be referred to Devon’s main office at 20 North Broadway, Oklahoma City, OK 73102-8260. Please contact: Brian Engel – Public Affairs (405-228-7750).**

**If The Above Actions Cannot Be Safely Accomplished:**

**Contact The Appropriate Government Agency(s) (911, Sheriff, Fire Dept., City Police Etc.).**

**Alert The Public That May Be Immediately Affected.**

- State Police - if on or near a state road
- Sheriff’s Dept. - if on or near a county road  
(Request help to evacuate the public if necessary and to help maintain roadblocks)
- Make any necessary recommendations, wind direction, affected area, etc.
- Start evacuation procedures where appropriate.
- Proceed with best plan (at the time) to regain control of the leak.
- Maintain tight security and safety procedures.

**Remember: after well is ignited, burning H<sub>2</sub>S will convert to SO<sub>2</sub>, which is also highly toxic. Do not assume the downwind area is safe after the well is ignited**

## Rescue & First Aid for Victims of Hydrogen Sulfide Poisoning

Don (put on) breathing apparatus.

Remove victim to fresh air as quickly as possible (i.e. Upwind from source or crosswind to achieve upwind). Do not run downwind.

### **Do not panic!**

Provide artificial respiration and/or CPR as necessary. (Use proper technique of turning your head after each breath to avoid inhaling exhaled H<sub>2</sub>S). If victim's clothing is contaminated with fluid that contains H<sub>2</sub>S then strip them to the waist.

### **Remain calm and think!**

Provide for prompt medical attention.

Notify the medical personnel beforehand that the victim has been poisoned by H<sub>2</sub>S (Carlsbad Medical Center 2430 W Pierce St, Carlsbad NM (505) 887-4100.)

In addition to basic First Aid, everyone on location should have a good working knowledge of CPR.

### **Physical Effects of Hydrogen Sulfide**

| Concentrations                 | Physical Effects  |
|--------------------------------|---|
| 0.001% 10 ppm                  | Obvious and unpleasant odor – safe for 8 hour exposure.   |
| 0.005% 50 ppm                  | Causes Flu-like symptoms and may cause pneumonia  |
| 0.01% 100 ppm                  | Numbs sense of smell in 3-5 minutes – may sting eyes and throat   |
| 0.02% 200 ppm                  | Numbs sense of smell rapidly, severely stings eyes and throat, severe flu-like symptoms 4 or more hours may cause lung damage and/or death. |
| 0.06% 600 ppm                  | Unconsciousness quickly, death will result if not rescued immediately. Initiate rescue breathing.   |
| * at 15.00 psia and 60 deg. F. |   |

### **Sulfur Dioxide (SO<sub>2</sub>)**

SO<sub>2</sub> is close to the toxicity of H<sub>2</sub>S. SO<sub>2</sub> can cause Flu-like symptoms and pneumonia rapidly. The maximum unprotected working level for SO<sub>2</sub> is 2 ppm for 8 hours.

### **CAUTION:**

Hydrogen Sulfide is a colorless, transparent gas and is flammable. It is heavier than air and may accumulate in low places.

## Public Evacuation Plan

1. When the Safety Supervisor determines the H<sub>2</sub>S or other emergency cannot be limited to the well location and the public will be involved, he will activate the evacuation plan.
2. The supervisor will notify local government agencies that a hazardous condition exists and evacuation needs to be implemented.
3. A safety person who has been trained in the use of H<sub>2</sub>S detection equipment and self-contained breathing apparatus shall monitor H<sub>2</sub>S concentrations, wind directions, and area of exposure. He will delineate the outer perimeter of the hazardous gas area. Extension to the evacuation area shall be determined from the information gathered.
4. Law enforcement shall be called to aid in setting up and maintaining roadblocks. They will also aid in evacuation of the public if necessary, but they shall not be asked to enter the hazardous zone.
5. Constant communication shall be maintained between company personnel and law enforcement personnel.
6. After the discharge of gas has been controlled, the safety person will determine when the area is safe for re-entry.

All atmospheric monitoring equipment shall have an established minimum level capability of reading H<sub>2</sub>S and SO<sub>2</sub> values.

## Controlling Public Access

Blocking off all public access within the Radius of Exposure is necessary in the event of a release of high concentrations of H<sub>2</sub>S/SO<sub>2</sub>. Escaping upwind is a temporary safe measure. **Do not assume that the upwind area will remain safe.** We must utilize the ROE because of the potential for the wind to shift directions. Access to the ROE must be controlled. If the ROE encompasses a public area, controlling access is a temporary function for company personnel, until local authorities take over.

## Emergency Communication Procedures

### Displaying the numbers

Emergency aid telephone numbers shall be conspicuously displayed near the best available outside communication, i.e. radio or phone. The emergency telephone numbers to be listed should include, but are not limited to: Doctor, Ambulance, Hospital and Sheriff. Land lines and cellular phones are to be available prior to drilling.

### Emergency telephone numbers should be updated as needed!

An air ambulance is available in this area; refer to the emergency call list. If these services are deemed necessary, you will need to give the following information:

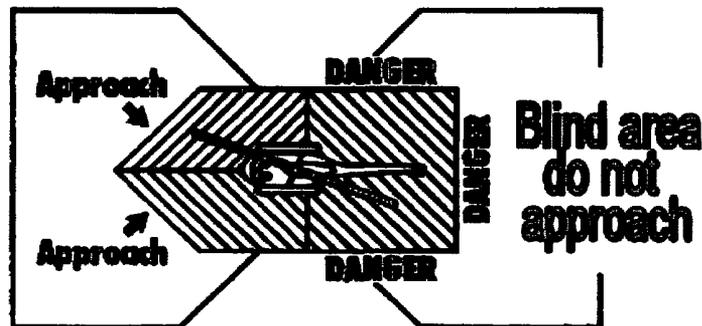

### Air Ambulance

1. Identification [ Longitude = W104°11'53.3" , Latitude = N32°22'02.0"]
2. County, Section, Range and Township (Section 28 – T22S – R27E)
3. Nature and type of injury or illness
4. Preferred landing zone
5. Phone number (Well site location phone number (\_\_\_\_) \_\_\_\_-\_\_\_\_)

### The Landing Zone

The on-site landing zone can be established with very little effort. The on-site supervisory staff should preplan it. Daylight hours require an area of approximately 100 feet by 100 feet to land safely. The area should be clear of obstacles, such as poles, trees, power lines, debris, etc. A smoke flare on the downwind side of the intended site to demonstrate wind direction to the approaching aircraft would be helpful. Nighttime hours require a slightly larger area for an extra margin of safety, again clear of obstacles and debris. The area should be established by lighting the four (4) corners of the intended site either with magnesium flares or with vehicles shining their headlights toward the center of the site from each of the four corners providing good illumination of the actual touchdown area. Never approach the helicopter while the blades are in motion, and never approach without a signal of acknowledgment from the pilot or out of the line of site from the pilot.

### Approaching a helicopter
