13. Describe Proposed or Completed Operation (clearly state all pertinent details, including estimated starting date of any proposed work and approximate duration thereof. If the proposal is to deepen directionally or recomplete horizontally, give subsurface locations and measured and true vertical depths of all pertinent markers and zones. Attach the Bond under which the work will be performed or provide the Bond No. on file with BLM/BIA. Required subsequent reports shall be filed within 30 days following completion of the involved operations. If the operation results in a multiple completion or recompletion in a new interval, a Form 3160-4 shall be filed once testing has been completed. Final Abandonment Notices shall be filed only after all requirements, including reclamation, have been completed, and the operator has determined that the site is ready for final inspection.)

Devon respectfully requests permission to do a bradenhead squeeze to satisfy the BLM's objection to the SWD C-108 application.

Devon would like to perform an injection test down the 9 5/8" x 7" annulus utilizing a radioactive tracer to determine injection depth beyond the 9 5/8" shoe (9 5/8" shoe depth @ 2810'). Once injection zone and rate are determined we would like to perform a bradenhead squeeze raising the top of cement in the 9 5/8" x 7" annulus to 700' (50' above the top of the Capitan). We would then like to run a cement bond log, to ensure adequate cement behind pipe.

Accepted for record

Re: Burton Flat Deep Unit #44

The BLM will object to the proposed salt water disposal well for the following reason.

1. According to the recent production reports, the well is still producing in paying quantities. Operator shall detail how they will recover the reserves if this well is converted to an SWD well.

Other notes:

1. The well is not being drilled and converted. This well is already in existence and the request is actually for conversion to an SWD.
2. Operator will be required to bring cement on the 7" up to a minimum of 50' above the top of the Capitan Reef. This well is within the four string area and the additional cement will provide an additional barrier for the Capitan Reef.
3. Once the objection is satisfied, the operator will be requested to evaluate existing logs and perform other tests to determine if the zone can be produced in paying quantities as part of the Conditions of Approval for the Sundry to Convert to Injection.. This is particularly critical in this case due to the lack of wells to the injection zone depth.
4. If not already listed, the conversion to injection shall be listed in the Unit Plan of Development for this unit.
5. Operator will be required to test casing to approved injection pressure.

If you have any questions regarding this approval, please contact Wesley W. Ingram,
Supervisory Petroleum Engineer at (575) 234-5982.

Sincerely,

A handwritten signature in cursive script that reads "Wesley W. Ingram".
