15 Oct 2013 21:52	5,383	1.0	73.8
15 Oct 2013 22:10	5,446	1.4	75.3

Inclination readings displayed in a small font were measured with slightly lower decoding accuracy than normal. This could occur, for example, if the Driller changed pump speed or tagged bottom prior to obtaining survey. These surveys are often very accurate. However, any such measurement that appears 'out of line' should be confirmed with a repeat survey.

Data enclosed in [] are interpolated. The Driller chose not to enter depths for these surveys. These interpolated surveys are marked in the graph with unfilled boxes and are joined with dotted lines. Interpolated surveys are not used in the accumulative displacement calculation.
