The central tank battery is located at the Beetle Juice 19 Fed 1H location NENE, Sec. 19-T19S-R31E. The production from the Beetle Juice 19 Fed 1H & Beetle Juice 19 Fed 2H will come to a common production header with isolation lines to route each wells production. From this point one well will be on test and its production routed through the test equipment. The Betelgeuse 19 Fed Com 5H & 6H production will flow through their own three phase separator with coriolis to meter the oil, flow meter to meter the water, and gas allocation meter to meter the gas. VRU will be allocated back to each well utilizing a percentage of each wells monthly oil production.

The Beetle Juice 19 Fed 1H battery will have three oil tanks that all four wells will utilize and they have a common Duke Energy Central Delivery Point #7296954 which is located on the southwest corner of the facility. Oil, gas, and water volumes from the Beetle Juice 19 Fed 1H & 2H producing to this battery will be determined by using a test separator/heater treater at the proposed facility. Well tests for these wells will be conducted at least once per month, for a minimum of 24 hours to allocate production back to each well. Oil, gas, and water volumes for the Betelgeuse 19 Fed Com 5H & 6H will have their own test separator/heater treater.

Working, royalty, and overriding interest owners are not identical and have been notified via certified mail (see attachment).

APPLICATION FOR A LEASE COMMINGLE

Proposal for a Lease Commingle/Off-Lease Measurement

Devon Energy Production Company, LP is requesting approval for a Lease Commingle due to difference in ownership

Federal Lease: NN	∕INM 90534		Oil						
Well Name	Surface Location	API#	Pool 97020	BOPD	Gravities	MCFPD	BTU

Betelgeuse 19 Fed	6H SWNW Sec. 20, T19S, R3	LE 30-015-42031	Hackberry; Bone Spring, NW	37	37	75	1445.4 *		

^{*}These numbers are proposed, production volumes will be submitted upon receipt.

Attached is a map displays the federal leases and well locations in Sections 19-T19S-31E & 20-T19S-31E

The BLM's interest in all four wells is the same.

Oil & Gas metering:

The central tank battery is located at the Beetle Juice 19 Fed 1H location NENE, Sec.19-T19S-R31E. The production from the Beetle Juice 19 Fed 1H & Beetle Juice 19 Fed 2H will come to a common production header with isolation lines to route each wells production. From this point one well will be on test and its production routed through the test equipment. The Betelgeuse 19 Fed Com 5H & 6H production will flow through their own three phase separator with coriolis to meter the oil, flow meter to meter the water, and gas allocation meter to meter the gas. VRU will be allocated back to each well utilizing a percentage of each wells monthly oil production.

The Beetle Juice 19 Fed 1H battery will have three oil tanks that all four wells will utilize and they have a common Duke Energy Central Delivery Point #7296954 which is located on the southwest corner of the facility. Oil, gas, and water volumes from the Beetle Juice 19 Fed 1H & 2H producing to this battery will be determined by using a test separator/heater treater at the proposed facility. Well tests for these wells will be conducted at least once per month, for a minimum of 24 hours to allocate production back to each well. Oil, gas, and water volumes for the Betelgeuse 19 Fed Com 5H & 6H will have their own test separator/heater treater.

The well which is on test production from the Beetle Juice Fed 1H & 2H flows to the separator, where after separation gas is routed to the gas test meter #677-49-9147, then to the DCP CPD #7296954 on location in Sec. 19-T295-31E-. Produced water and oil from each well are separated, the oil then flows into an oil production line where it is combined with the other wells oil and flows to one of the 500 bbl. The water is metered using a mag meter and then flows to the 500 bbl. produced water tank, along with the water from the well that was not on test.

The Betelgeuse 19 Fed 5H production flows to a three phase test separator, where after separation gas is routed to the gas test meter (number will be provided upon receipt), then to the DCP CDP #7296954. Produced water and oil are separated, the oil is then metered with a Micro Coriolis meter (number will be provided upon receipt) and water is metered using a mag meter. The oil then flows into an oil production line where it is combined with the other wells oil and flows to one of the 500 bbl. The water from this well flows to the 500 bbl. produced water tank, along with the water from the other wells.

The Betelgeuse 19 Fed 6H production flows to a three phase test separator, where after separation gas is routed to the gas test meter (number will be provided upon receipt), then to the DCP CDP #7296954. Produced water and oil are separated, the oil is then metered with a Micro Coriolis meter (number will be provided upon receipt) and water is metered using a mag meter. The oil then flows into an oil production line where it is combined with the other wells oil and flows to one of the 500 bbl. The water from this well flows to the 500 bbl. produced water tank, along with the water from the other wells.

Devon Energy Production Company, LP understands the requested approval will not constitute the granting of any right-of-way or construction rights not granted by the lease instrument. ROW NM-127347 & ROW-127345. ROW has been or will be submitted for the Betelgeuse 19 Fed 5H & 6H.

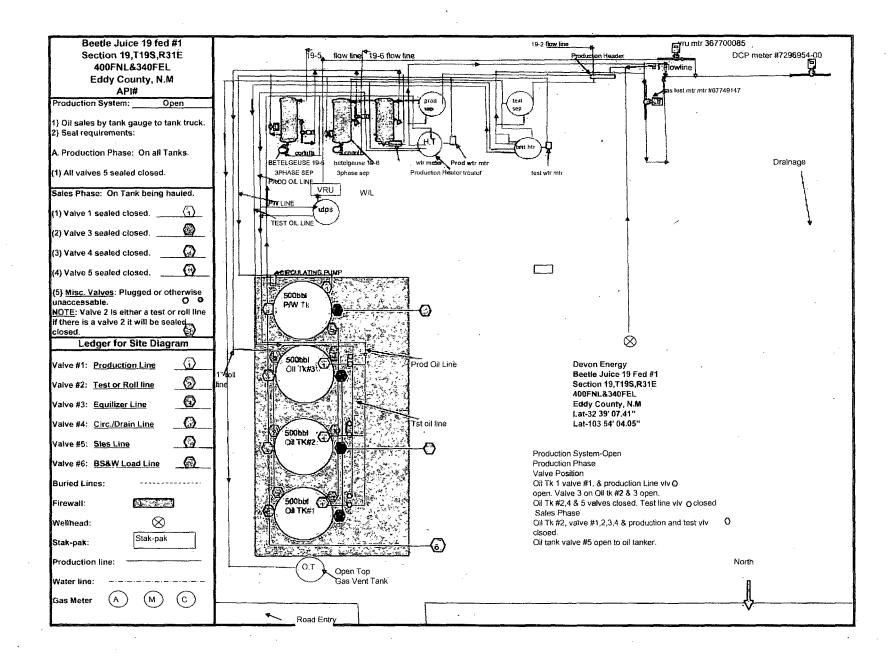

Working, royalty, and overriding interest owners have been notified of this proposal via certified mail (see attached).

We have a master sales agreement in place for all the 3rd Bone Spring wells in Parkway and Hackberry units. All new oil production in these areas is sweet. Therefore commingling oil will have no impact on whether the oil is sold as sweet or sour, it is all being sold as sweet. Part of this agreement is that all oil is deemed as 40 API. Therefore, regardless of the API values of the individual wells, the common stream will be sold as if it was 40 API. Since the highest value is at 40API, the commingled stream will have the same value as the two individual streams.

Gentlemen:

This is to advise you that Devon Energy Production Company, LP, is filing an application with the New Mexico Oil Conservation Division ("NMOCD") seeking approval for a Central Tank Battery & Commingle.

A copy of our application submitted to the Division is attached.

Any objections or requests that a hearing should be held regarding this application must be submitted to the New Mexico Oil Conservation Division Santa Fe office within 20 days from the date of this letter.

Please contact the undersigned at (405) 552-7970 should you have any questions or need anything further.

Sincerely,

Devon Energy Production Company, L.P.
