		NMOCD ARTESIA
Describe Cause of Problem and Remedial Action Taken.* The 6" crude oil gathering line was struck and ruptured by a track-hoe operated by New Mexico		
Rental while excavating a line operated by Enterprise. Vacuum trucks were immediately dispatched to the spill location, LACT units were shut down, and		
the damaged section of pipe was isolated. The track-hoe excavated the damaged area, and a temporary repair clamp was used to stop the flow of oil. The		
line was permanently repaired on 12/7/13 by replacing the damaged section of pipe.		
Describe Area Affected and Cleanup Action Taken.* The spill was contained within the excavation, which was in the middle of a lease road. The		
excavation measured approximately 30 ft. by 10 ft. by 6 ft. in depth. Approximately 220 bbls of crude oil was recovered from the excavation and placed back into the production facilities at the PLU-227 and PLU-213. The site was remediated as per NMOCD recommended guidelines and met the objectives		
set forth in the Remediation Summary & Risk-Based Site Closure Proposal dated December 2013. Please reference the attached Remediation Summary &		
Site Closure Request for remediation details.		
I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to NMOCD rules and		
regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger		
public health or the environment. The acceptance of a C-141 report by the NMOCD marked as "Final Report" does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to ground water, surface water, human health		
or the environment. In addition, NMOCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other		
federal, state, or local laws and/or regulations.
