NATURE OF RELEASE														
Type of Release Produced water/Oil							Volume of Release Unknown Volume Recovered None							
Source of Release Break in flow line							Date and Hour of Occurrence Date				and Hour of Discovery			
Was Immediate Notice Given?						Unknown 6/27/11 If YES, To Whom?								
Yes No Not Required														
By Whom?							Date and Hour							
Was a Watercourse Reached? ☐ Yes ☒ No							If YES, Volume Impacting the Watercourse.							
If a Watercou	rse was Imr	pacted. Descri	be Fully.*								<u> </u>			
Describe Cause of Problem and Remedial Action Taken.* While BLM was inspecting another site in the area, BLM discovered a flow line release to the J.L. Keel A #28 injection well. A total of 6762 sq ft of pasture land was affected by the release.														
Describe Area Affected and Cleanup Action Taken.* RECS personnel were on site beginning on October 25 th , 2013 to assess the site. The release was sampled at the surface and at depth at six points throughout the release area. The samples were field tested for chlorides and hydrocarbons and representative samples were taken to a commercial laboratory for analysis. The release on the east side of the road was located over a former pit area. On November 1 st , 2013, RECS met with BLM at the site. BLM recommended that the release on the east side of the lease road and the pit area be capped with 6 inches of caliche and then 2 ft of clean, imported topsoil. The site would then be seeded with a blend of native vegetation. The area to the west side of the lease road did not need to be addressed since sampling indicates no ecological detriment occurred to the area. A Corrective Action Plan (CAP) detailing these actions was submitted to NMOCD and BLM on November 14 th , 2013. BLM approved the CAP on November 15 th , 2013 and NMOCD approved the CAP on February 13 th , 2014. CAP activities began at the site on February 18 th , 2014. A total of 180 yards of caliche was imported to the site and used to top-cap the east release area and pit. The caliche was watered and roller packed to provide a compact surface. A total of 694 yards of clean topsoil was imported to the site to backfill over the caliche to a depth of 2 ft. A sample of the imported soil was taken to a commercial laboratory for analysis and returned a chloride result of non-detect. On March 10 th , 2014, soil amendments were added to the site and the site was seeded with BLM mix #2 and #4.
