RECEIVED

If a Watercourse was Impacted, Describe Fully.*

Describe Cause of Problem and Remedial Action Taken.*
While performing normal operations of producing into and removal of product from the temporary flow back tanks, a fire was notified of one of the frac tanks. The process was shut down, 911 was called, and equipment and personnel were move to a safe place away from the fire. Fire departments were dispatched to the site from Malaga, Loving, and Otis. The fire was extinguished at 12:12 p.m. Emergency personnel remained on-site cooling down equipment until it was safe for normal operations personnel to assess the damage.

Describe Area Affected and Cleanup Action Taken.*
There was no hydrocarbon product impact to the surface of the well pad. There were containments around all of the frac tanks; however most of them were destroyed by the heat of the fire. The only fluid observed after the fire was extinguished was fresh water and foam. It was noted that there was no sheening visible on the water.
The damaged tanks will be removed, new containments will be constructed around the replacement tanks. A complete summary report will be submitted after the investigation has been completed.

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to NMOCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the NMOCD marked as "Final Report" does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to ground water, surface water, human health or the environment. In addition, NMOCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.
