RECEIVED

Describe Cause of Problem and Remedial Action Taken.*
A 1/2" connection on water transfer pump failed releasing produced water to lined containment. Approximately 1 bbl of produced water was released to ground surface between tank containments & south of transfer pump. All remaining fluid remained inside containment area.

Describe Area Affected and Cleanup Action Taken.*
The spill impacted a small area of the tank battery pad between the lined tank containments. Failed connection was replaced and returned transfer pump to normal operations. Vacuum truck and steamer crew were called in to clean liner.

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to NMOCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the NMOCD marked as "Final Report" does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to ground water, surface water, human health or the environment. In addition, NMOCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.
