Watercourse was Impacted, Describe Fully.*

Describe Cause of Problem and Remedial Action Taken.*

A 4" SWD line was found leaking from a faulty emergency repair clam. The 4" SWD line was removed from service.

Describe Area Affected and Cleanup Action Taken.*

Initially an estimated 40 bbls were released from the faulty poly line. There was very little standing fluid from the release and therefore we were unable to recover any produced water with a vacuum truck. From the source, the fluid traveled down slope in a stream measuring 2'-3' x 300'. Remediation was completed in accordance with the remediation plan approved by Mike Bratcher of NMOCD and by Randal Pair of the BLM via email on 03/10/2014.

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to NMOCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the NMOCD marked as "Final Report" does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to ground water, surface water, human health or the environment. In addition, NMOCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.
