13. Describe Proposed or Completed Operation: Clearly state all pertinent details, including estimated starting date of any proposed work and approximate duration thereof. If the proposal is to deepen directionally or recomplete horizontally, give subsurface locations and measured and true vertical depths of all pertinent markers and zones. Attach the Bond under which the work will be performed or provide the Bond No. on file with BLM/BIA. Required subsequent reports must be filed within 30 days following completion of the involved operations. If the operation results in a multiple completion or recompletion in a new interval, a Form 3160-4 must be filed once testing has been completed. Final Abandonment Notices must be filed only after all requirements, including reclamation, have been completed and the operator has determined that the site is ready for final inspection.)

To improve the rheology of the cement slurry to pass through tight clearance of cementable 5 1/2" casing patch when cementing the tie back string, the cement slurry will be altered from one class C neat slurry to a 200 sx class C 50/50 poz lead slurry, then a 75 sx class C neat tail slurry. There is no change in volume and the compressive strength will still be well over the 500 psi requirement of Onshore Order 2.III.B. The cement design is still set up to circulate to surface. This change is being made after discussions with the tool company, cement company, onsite representatives, and the Carlsbad BLM office.

My note: discussed this w/ BLM engineer Kenny Rennick 1/21/2016 on a phone call and received verbal approval for change..
