13. Describe Proposed or Completed Operation (clearly state all pertinent details, including estimated starting date of any proposed work and approximate duration thereof. If the proposal is to deepen directionally or recomple horizontally, give subsurface locations and measured and true vertical depths of all pertinent markers and zones. Attach the Bond under which the work will be performed or provide the Bond No. on file with BLM/BIA. Required subsequent reports shall be filed within 30 days following completion of the involved operations. If the operation results in a multiple completion or recomple in a new interval, a Form 3160-4 shall be filed once testing has been completed. Final Abandonment Notices shall be filed only after all requirements, including reclamation, have been completed, and the operator has determined that the site is ready for final inspection.)

12/13/15 Per BLM's conditions of approval, we performed a Bradenhead squeeze of the 9-5/8" x 7-5/8" casing annulus. Pumped 435 sacks (200 BBLS) of class H lead cement and displaced with 2 BBLS of fresh water. Followed up with an IBC-CBL run post-remediation. We ran Schlumberger's CBL & IBC from 10,450' MD (4,250' TOC before remediation ACCORDING TO Temp Log) to Surface. The CBL & IBC Logs were emailed to Chris Walls.

The IBC-CBL shows TOC around 1,500' MD (where the amplitude begins to stay consistently below the 20 mV indicating cement coverage). There is more than 2,710' of cement lapped inside the 9-5/8" casing shoe at 4,210' MD (minimum BLM required cementing top at 3,610 ft; 600 ft inside 9-5/8" casing shoe), based on the CBL & IBC logs COP recommends no further remediation.
