Additional data for EC transaction #346670 that would not fit on the form

32. Additional remarks, continued

J-55 IPC tubing and TIH with the nickel plated injection packer. Set the packer at +/- 4,220 ft and perform a mechanical integrity test on the annulus by holding 500 psi for 30 minutes. 7. Return the well to production

Conditions of Approval

Yates Petroleum Corporation Donahue - 01, API 3001500087 T20S-R24E, Sec 10, 1980FNL & 660FWL August 22, 2016

- **1.** Operator is required to have the BLM approved NOI procedure with applicable conditions of approval on location for this workover operation.
- 2. Before casing or a liner is added, replaced, or repaired prior BLM approval of the design is required. Use notice of intent Form 3160-5.
- 3. Subject to like approval by the New Mexico Oil Conservation Division.
- 4. Step 4. of NOI: Use of class "C" (depth less than 7500ft) will be necessary. Class "C" neat squeeze cement is be mixed 14.8#/gal, 1.32 ft³/sx, 6.3gal/sx water.
- 5. Provide BLM with an electronic copy (Adobe Acrobat Document) cement bond log record from 4196 or below to top of cement taken with 0psig casing pressure. The CBL may be attached to a <u>pswartz@blm.gov</u> email or submitted via BLM's WIS.
- 6. Surface disturbance beyond the existing pad shall have prior approval.
- 7. A closed loop system is required. The operator shall properly dispose of drilling/circulating contents at an authorized disposal site. Tanks are required for all operations, no excavated pits.
- 8. Functional H_2S monitoring equipment shall be on location.
- 9. 2000 (2M) Blow Out Prevention Equipment to be used. All BOPE and workover procedures shall establish fail safe well control. Blind ram(s) and pipe ram(s) designed to close on all workstring diameters used is required equipment. A manual BOP closure system (hand wheels) shall be available for use regardless of BOP design. Function test the installed BOPE to 500psig when well conditions allow. Related equipment, (choke manifolds, kill trucks, gas vent or flare lines, etc.) shall be employed when needed for reasonable well control requirements.
- 10: All waste (i.e. trash, salts, chemicals, sewage, gray water, etc.) created as a result of work over operations shall be safely contained and disposed of properly at a waste disposal facility. No waste material or fluid shall be disposed of on the well location or surrounding area. Porto-johns and trash containers will be on-location during fracturing operations or any other crew-intensive operations.
- 11. After drill out, perform a charted casing integrity test of 1000psig minimum. Document the pressure test on a one hour full rotation calibrated (within 6 months) recorder chart registering within 35 to 75 per cent of its full range. Verify all annular casing vents are plumbed to the surface and open during this pressure test. <u>Call BLM 575-361-2822 and arrange for a BLM witness of that pressure test.</u> Include a copy of the chart in the subsequent sundry for this workover.

- 12. Workover approval is good for 90 days (completion to be within 90 days of approval). A legitimate request is necessary for extension of that date.
- 13. Submit a (BLM Form 3160-5 subsequent report (daily reports) via BLM's Well Information System; <u>https://www.blm.gov/wispermits/wis/SP</u> (email <u>pswartz@blm.gov</u> for operator setup instructions) describing all wellbore activity and Mechanical Integrity Test as per item 1) above. Include (dated daily) descriptions of the well work and the setting depths of installed equipment: internally corrosive protected tubing, profile nipple, and tubing on/off equipment just above the packer. File the form within 30 days of any interrupted workover procedures and a complete workover subsequent sundry.
- 14. Submit the BLM Form 3160-4 Recompletion Report within 30 days of the date all BLM approved procedures are complete.
- 15. Enclose a site security diagram for the water disposal facility upstream of this well. Document the lease name and the lease number of the source(s) of production water disposed to that facility with the diagram.

Well with a Packer - Operations

- 1) Conduct a Mechanical Integrity Test of the tubing/casing annulus after a tubing, packer or casing seal is established.
- 2) The minimum test pressure should be 500 psig for 30 minutes or 300 psig for 60 minutes, with a minimum 200 psig differential between tubing and casing pressure (at test time) but no more than 70% of casing burst pressure as described by Onshore Order 2.III.B.1.h. (The tubing or reservoir pressure may need to be reduced). Verify all annular casing vents are plumbed to surface and those valves open to the surface during this pressure test. An alternate method for a BLM approved MIT is to have the fluid filled system open to atmospheric pressure and have a loss of less than five barrels in 30 days witnessed by a BLM authorized officer.
- 3) Document the pressure test on a one hour full rotation calibrated (within 6 months) recorder chart registering within 35 to 75 per cent of its full range. Greater than 10% pressure leakoff will be viewed as a failed MIT. Less than 10% pressure leakoff will be evaluated site specifically and may restrict injection approval.
- 4) Make arrangements 24 hours before the test for BLM to witness. In Eddy County phone 575-361-2822. In Lea County phone 575-393-3612. If no answer, leave a voice mail or email with the API#, workover purpose, and a call back phone number.
- 5) The setting depths and descriptions of inside casing injection equipment is to be included in the subsequent sundry.
- 6) Compliance with a NMOCD Administrative Order is required.
 - a) Approved injection pressure compliance is required.

- b) If injection pressure exceeds the approved pressure you are required to reduce that pressure and notify the BLM within 24 hours.
- c) When injection pressure is within 50 psig of the maximum pressure, install automation equipment that will prevent exceeding that maximum. Submit a subsequent report (Sundry Form 3160-5) describing the installed automation equipment within 30 days.
- 7) Stimulation injection pressures are not to exceed BLM's permitted wellhead pressure or the well's frac pressure established by a BLM approved step rate test for Class II water injection wells.
- 8) Unexplained significant variations of rate or pressure to be reported within 5 days of notice.
- 9) The casing/tubing annulus is required to be monitored for communication with injection fluid or loss of casing integrity. A BLM inspector may request verification of a full annular fluid level at any time.
- 10) A "Best Management Practice" is to maintain the annulus full of packer fluid at atmospheric pressure. Equipment that will display on site, continuous open to the air fluid level is necessary to achieve this goal.
- 11) Loss of packer fluid above five barrels per month indicates a developing problem. Notify BLM Carlsbad Field Office, Petroleum Engineering within 5 days.
- 12) A suggested format for monthly records documenting that the casing annulus is fluid filled is available from the BLM Carlsbad Field Office.
- 13) Gain of annular fluid pressure requires notification within 24 hours. Cease injection and maintain a production casing pressure of 0psia. Notify the BLM's authorized officer ("Paul R. Swartz" <<u>pswartz@blm.gov></u>, cell phone 575-200-7902). If there is no response phone 575-361-2822.
- 14) Class II (production water disposal) wells will not be permitted Stimulation Pressures or "Injectivity Tests" that exceed the NMOCD/BLM generic frac pressure which is: .2 x ft depth to the topmost injection or 50psig below the frac point as clearly indicated by a BLM accepted "Step Rate Test".
- 15) A NOI sundry shall be submitted to the BLM for the purpose of applying for increased disposal wellhead pressure prior to running a "Step Rate Test". An injectivity test ran to determine the disposal rate at 0.2 x the depth of the top perforation requires no sundry.
- 16) The subsequent report is to include all stimulation injection pressures. Report maximum/minimum injection rate (BPM) and max/min stimulation injection pressures (psig).
- 17) Submit a (BLM Form 3160-5 subsequent report (daily reports) via BLM's Well Information System; <u>https://www.blm.gov/wispermits/wis/SP</u> describing (dated daily) all wellbore activity including the Mechanical Integrity Test chart document.
