If a Watercourse was Impacted, Describe Fully.*

Describe Cause of Problem and Remedial Action Taken.*

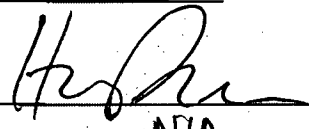

The release was caused when the dump valve on the inlet separator failed causing oil to go to the flare. The dump valve was replaced. Vacuum trucks were immediately dispatched to recover all standing fluids.

Describe Area Affected and Cleanup Action Taken.*

This release occurred on the well pad location and overspray went into the pasture. Free standing fluids were removed via vacuum truck and microblaze was applied to impacted vegetation and soil in the pasture. Concho will have the spill site sampled to determine the impact from the release and we will present a remediation work plan to the NMOCD for approval prior to any significant remediation work.

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to NMOCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the NMOCD marked as "Final Report" does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to ground water, surface water, human health or the environment. In addition, NMOCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.
