Offline Cementing

Oxy requests a variance to cement the 7.625" intermediate casing strings offline on the following wells, in accordance to the approved variance, EC Tran 461365:

API #	Well Name	Lease Serial #
30-015-45112	Sunrise MDP1 8-5 Federal Com 174H	NMNM089172
30-015-45152	Sunrise MDP1 8-5 Federal Com 175H	NMNM089172
30-015-45153	Sunrise MDP1 8-5 Federal Com 176H	NMNM089172

The summarized operational sequence will be as follows:

- 1. Run casing as per normal operations. While running casing, conduct negative pressure test and confirm integrity of the float equipment (float collar and shoe).
- 2. Land casing.
- 3. Fill pipe with kill weight fluid, and confirm well is static.
 - a. If well is not static notify BLM and kill well.
 - b. Once well is static notify BLM with intent to proceed with nipple down and offline cementing.
- 4. Set and pressure test annular packoff.
- 5. After confirmation of both annular barriers and internal barriers, nipple down BOP and install cap flange. If any barrier fails to test, the BOP stack will not be nippled down until after the cement job is completed.
- 6. Skid rig to next well on pad.
- 7. Confirm well is static before removing cap flange.
- 8. If well is not static notify BLM and kill well prior to cementing or nippling up for further remediation.
- 9. Install offline cement tool.
- 10. Rig up cement equipment.
 - a. Notify BLM prior to cement job.
- 11. Perform cement job.
- 12. Confirm well is static and floats are holding after cement job.
- 13. Remove cement equipment, offline cement tools and install night cap with pressure gauge for monitoring.
