Final Reserve Pit Closure Results Eddy County, New Mexico

Dear Mr. Bratcher,

COG Operating LLC (COG) has retained Highlander Environmental Corp. (Highlander) to assist them in the testing and closure of the reserve pit on the above mentioned well location. Attached you will find the results of both the field sampling and laboratory results for the work that was performed on 9/13/2007. The pit was closed by trench burial.

As per your verbal approval on 9/14/2007, the area of elevated chloride in the southwest corner of the pit was excavated. The bottom 10' of the southwest corner to a point halfway to the northwest corner of the outer horseshoe was removed. Because the burial trench was full, the bottom of the excavation was leveled and 12 mil plastic was used to line the bottom and sides. The material that had been excavated from this area was then placed back into the now lined trench. Plastic was then placed on top of the trench and the reserve pit was closed and re-contoured. The top of the plastic in this new burial trench was 10' below the ground surface.

Should you need additional information regarding this issue, please contact me at 432-682-4559 or my email address at gmiller@hec-enviro.com.

Gary Miller, Agent

Highlander Environmental Corp.
