13. Describe Proposed or Completed Operation (clearly state all pertinent details, including estimated starting date of any proposed work and approximate duration thereof. If the proposal is to deepen directionally or recompleate horizontally, give subsurface locations and measured and true vertical depths of all pertinent markers and zones. Attach the Bond under which the work will be performed or provide the Bond No. on file with BLM/BIA. Required subsequent reports shall be filed within 30 days following completion of the involved operations. If the operation results in a multiple completion or recompleation in a new interval, a Form 3160-4 shall be filed once testing has been completed. Final Abandonment Notices shall be filed only after all requirements, including reclamation, have been completed, and the operator has determined that the site is ready for final inspection.)

This location was originally permitted as a 40 acre spacing Loco Hills; Glorieta-Yeso well with TD of 5950'.
COG respectfully requests permission to drill this location as a 80 acre spacing Abo well with a TVD of 7810'.
An updated C-102 will be forwarded as soon as possible. Proposed procedure is as follows:

1. Complete well and drill 2000' lateral in Basal Abo.
2. Set 5-1/2" CIBP @ +/- 7650' above existing perfs 7736' - 7838'.
3. Set cased hole whipstock @ +/- 7500' and mill 4-3/4" exit window in 5-1/2" casing.
4. Drill 4-3/4" hole and kick off at +/- 7530', building curve over +/- 300' to horizontal at 7760' TVD. Drill horizontal section in an easterly direction for +/-2000' lateral to TD at +/-9650' MD, 7810' TVD.
5. Run 2-7/8" 6.5# L80 8rd tubing as production liner in uncemented open hole lateral and set isolation packers with Liner top packer @ +/- 7450'.
6. COG requests a variance to the 200' minimum tie back in order to set the pump as close to the formation as possible. The window and horizontal are all located in the Abo Formation.
