Conditions of approval for closure of a drilling pit

Notify OCD District 2 office 48 hours prior to commencement of closure activities.

Notify OCD District 2 office 48 hours prior to obtaining samples where analyses of samples obtained are to be submitted to OCD.

⊕ Sampling requirements are listed in 19.15.17.13 [NMAC] (Pit Rule)

Final closure report is to be submitted to OCD not later than 60 days after completion of closure.

⊕ Note: An EPA Method 418.1 must be run in addition to the EPA Method 8015M

Protocols and Procedure

All pit material and liners will be excavated and transported to Lea Land Inc.

Confirmation Sampling Plan

After excavation a five point composite will be collected from the bottom of the excavation and grab samples will be retrieved from any area that is wet, discolored or showing other evidence of a release.

 The samples will be transported under Chain of Custody to a third party laboratory and analyzed for BTEX (EPA Method 8021B), GRO & GRO (EPA Method 8015M), Chlorides (EPA Method 300.0) *SEE CONDITIONS OF APPROVAL*

If the sampling program demonstrates that a release has not occurred or that any release does not exceed the concentrations specified in Subparagraph (b) of Paragraph (1) of Subsection B of 19.15.17.13 NMAC, then excavation will be backfilled

If the sampling program demonstrates a release it will be reported to the NMOCD on a C-141.

Disposal Facility Name and Permit Number

The excavated materials will be disposed of at Lea Land Inc. Permit # WM-1-035

Soil Backfill and Cover Design Specifications

The excavation will be backfilled with compacted, non-waste containing, earthen material; covered and contoured with topsoil consistent with the background thickness of topsoil or one foot of suitable material, whichever is greater.

Re-vegetation Plan

The area will be reseeded when the weather conditions are favorable for the establishment of vegetation.

Site Reclamation Plan

The location will be restored to its original condition prior to oil and gas operations. It will be re-contoured in order to blend with the surrounding topography.
