13. Describe Proposed or Completed Operation: Clearly state all pertinent details, including estimated starting date of any proposed work and approximate duration thereof. If the proposal is to deepen directionally or recompleat horizontally, give subsurface locations and measured and true vertical depths of all pertinent markers and zones. Attach the Bond under which the work will be performed or provide the Bond No. on file with BLM/BIA. Required subsequent reports must be filed within 30 days following completion of the involved operations. If the operation results in a multiple completion or recompleat in a new interval, a Form 3160-4 must be filed once testing has been completed. Final Abandonment Notices must be filed only after all requirements, including reclamation, have been completed and the operator has determined that the site is ready for final inspection.)

7/28/09 - As per the written order # 04-015-09W, Marbob Energy Corporation proposes to complete the reclamation procedures identified in the written order with the exception of Environmental Problem # 2. The soils around the bore hole are not sterile and will not be disposed of. As explained to BLM staff, the Bore hole area has some vegetation (primarily mesquite, creosote, and buffalo grass) and these plants would not occur in a sterile state. The Bore hole is a rubbing post for livestock and has been trampled and compacted. Marbob proposes to deep rip this area again and reseed. To prevent livestock use on vegetation and continued trampling, a fence will be constructed around the location to allow for revegetation. The fence will be removed once reclamation has been achieved.

Reclamation work is expected to be completed within the next 30 days, however a subsequent letter from the BLM requiring additional work to the ROW may be forthcoming. If so, then reclamation work may not be completed this year due to the small number of days in the growing season.
